Subject: Online Lecture Series on Standard Treatment Guidelines

Dear Sir/ma'am,

A stroke is a life-threatening condition that happens when part of the brain doesn't have enough blood flow. This is most commonly caused by a blocked artery or brain bleeding. Stroke is the second-commonest cause of death in India, with the country recording one stroke death every four minutes. India bore the maximum burden of stroke, with 68.6 percent incidence of stroke, 70.9 percent stroke deaths, and 77.7 percent disability-adjusted life years (DALYs) lost. About 1,85,000 strokes occur every year in India.

A stroke is a life-threatening emergency condition where every second counts. This emphasises the importance of managing stroke. Therefore, focusing on this important healthcare problem, the next session in this lecture series, "**Acute Stroke Management**," has been scheduled for June 15, 2024, and the speakers are Dr. Suman Kushwaha, Professor, Department of Neurology, IHBAS, Delhi, and Dr. Sangeeta Sharma, President, DSPRUD.

You are requested to disseminate the information to all public healthcare facilities, and available clinicians, nurses, and other healthcare professionals may be encouraged to join the webinar. The agenda of the session is placed in **Annexure 'A'**.

Link for the online lecture is given below -

Date: 15.06.2024

Time: 2.30 PM to 5.00 PM

Registration WebEx link from PC, Mac, iOS or Android:
